When relocating to a new office, minimizing downtime is critical. Moving computer networks and PCs presents a unique challenge.

SSE network engineers can help you plan your move, ensuring your network infrastructure is designed to industry best practices to create optimal efficiency and allow for a smooth transition to your new site. SSE can assist you with the following:

IT INFRASTRUCTURE CONSULTING

Assessing current IT infrastructure including number of servers, workstations, printers, and other hardware and projected growth at the new location.

NEW SITE PLANNING

Planning number and location of power connections, requirements for a server room and a centralized data wiring hub at the new location.

SITE WALKTHROUGH

Performing a site walkthrough to validate the new site plan.

IMPLEMENTATION

Coordinating with select Internet Service Providers (ISPs) and data wiring vendors to manage new data wiring installation and testing new Internet connectivity. Preparing and shutting down servers and other hardware before the move. Bringing servers and IT infrastructure back online in new location and ensuring full functionality.
